

# EMC TEST REPORT

Product Name: Eagle-M4 Pro series

Trade mark: /

Model No.: LXPS-DS4423-M-79 940nm

S/N: /

Report No.: CTB230523017E

Applicant: Hangzhou Lanxin Technology Co., Ltd.

Address: 7-902, China Artificial Intelligence Town, No. 1818-2 on Wenyi West Road,  
Yuhang District, Hangzhou, Zhejiang, China

Manufacturer: Hangzhou Lanxin Technology Co., Ltd.

Address: 7-902, China Artificial Intelligence Town, No. 1818-2 on Wenyi West Road,  
Yuhang District, Hangzhou, Zhejiang, China

Prepared by: Shenzhen CTB Testing Technology Co., Ltd.

Address: 1&2/F., Building A, No.26, Xinhe Road, Xinqiao, Xinqiao Street, Bao'an  
District, Shenzhen, Guangdong, China

Date of Receipt: May 18, 2023

Date of Test(s): May 19, 2023 ~ May 22, 2023

Date of Issue: May 25, 2023

Test Standard(s): EN IEC 61000-6-2:2019, EN IEC 61000-6-4:2019  
EN IEC 61000-3-2:2019/A1:2021, EN 61000-3-3:2013/A1:2019/A2:2021

Test Result: Pass

In the configuration tested, the EUT complied with the standards specified above

Note: Note: If there is any objection to the inspection results in this report, please submit a written report to the company within 15 days from the date of receiving the report. The test report is effective only with both signature and specialized stamp. This result(s) shown in this report refer only to the sample(s) tested. Without written approval of Shenzhen CTB Testing Technology Co., Ltd. this report can't be reproduced except in full. The tested sample(s) and the sample information are provided by the client. “\*” indicates the testing items were fulfilled by subcontracted lab. “#” indicates the items are not in CNAS accreditation scope.

| Immunity (EN IEC 61000-6-2)                                |                  |                  |
| Requirement - Test                                         | Test Method      | Result           |
| Electrostatic discharges (ESD)                             | IEC 61000-4-2    | PASS             |
| Radio-frequency electromagnetic field(RS)                  | IEC 61000-4-3    | PASS             |
| Fast transients(EFT)                                       | IEC 61000-4-4    | N/A <sup>1</sup> |
| Surges                                                     | IEC 61000-4-5    | N/A <sup>1</sup> |
| Radio-frequency common mode(CS)                            | IEC 61000-4-6    | N/A <sup>1</sup> |
| Power frequency magnetic field(PFMF)                       | IEC 61000-4-8    | N/A <sup>2</sup> |
| Voltage dips and interruptions(Dips)                       | IEC 61000-4-11   | N/A <sup>1</sup> |

**Note:** N/A is abbreviation for Not Applicable.

1. The Product is powered by DC power, this test items is not applicable.
2. The Product doesn't contain any device susceptible to magnetic fields.

### 3. Measurement uncertainty

The reported uncertainty of measurement  $y \pm U$ , where expanded uncertainty  $U$  is based on a standard

| Test               | Frequency            | Expanded Uncertainty ( $U_{Lab}$ ) |
|--------------------|----------------------|------------------------------------|
| Conducted Emission | 150 kHz to 30 MHz    | $\pm 3.2$ dB                       |
| Radiated Emission  | 30 MHz to 1000 MHz   | $\pm 4.8$ dB                       |
| Radiated Emission  | 1000 MHz to 6000 MHz | $\pm 4.9$ dB                       |

uncertainty multiplied by a coverage factor of  $k=2$ , providing a level of confidence of approximately 95 %

#### 4. General information

##### 4.1. Description of EUT

|                                                          |                                                                                                                                                                                                                                                                                                                                                                                                            |

**Note:** The above EUT information is declared by manufacturer and for more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

##### 4.2. Description of Accessory Device

| No. | Device Type     | Brand   | Model       | Specification | Note |
|-----|-----------------|---------|-------------|---------------|------|
| 1   | DC power supply | LONGWEI | TPR-12002D  | /             | /    |
| 2   | Laptop          | DELL    | Vostro 5490 | /             | /    |

##### 4.3. Test conditions

Temperature: 15-25℃  
 Relative Humidity: 30-60 %  
 Atmospheric pressure: 800hPa-1060hPa

##### 4.4. Block diagram of EUT configuration

##### 4.5. Operating condition of EUT

|                     |         |                  |              |        |
|---------------------|---------|------------------|--------------|--------|
| Operating condition | Mode 1* | Working          | Test Voltage | DC 24V |
|                     | Mode 2  | PING IP 100Mbps  | Test Voltage | DC 24V |
|                     | Mode 3  | PING IP 1000Mbps | Test Voltage | DC 24V |

Note: This test covers all possible operating modes of the device, only the worst data are list in report. The worst data are shows (\*) is the nearest standard limit which were recorded in this report.

## 5. List of Test and Measurement Instruments

| Continuous disturbance |                   |               |              |            |                  |

## 6. Emission

### 6.1. Conducted emission

#### 6.1.1. Block diagram of test setup

For table-top equipment

For floor standing equipment

### 6.1.2. Limit

Requirements for conducted emissions from the AC mains power ports of Class A equipment

| Frequency range<br>MHz | Coupling device | Detector type<br>/ bandwidth | Class A limits<br>dB(μV) |
|------------------------|-----------------|------------------------------|--------------------------|
| 0,15 to 0,5            | AMN             | Quasi Peak / 9 kHz           | 79                       |
| 0,5 to 30              |                 |                              | 73                       |
| 0,15 to 0,5            |                 | Average / 9 kHz              | 66                       |
| 0,5 to 30              |                 |                              | 60                       |

### 6.1.3. Test procedure

- The EUT was placed 0.4 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- LISN at least 80 cm from nearest part of EUT chassis.
- For the actual test configuration, please refer to the related Item –EUT Test Photos.

### 6.1.4. Test results

|                |              |                    |      |
|----------------|--------------|--------------------|------|

| 1 000 to 3 000         | FSOATS      | 3             | Average /<br>1MHz            | 56                               |
| 3 000 to 6 000         |             |               |                              | 60                               |
| 1 000 to 3 000         |             | 3             | Peak /<br>1MHz               | 76                               |
| 3 000 to 6 000         |             |               |                              | 80                               |

### 6.2.3. Test procedure

- The measuring distance of at 10 m shall be used for measurements at frequency up to 1GHz. For frequencies above 1GHz, any suitable measuring distance may be used.
- The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 10 meter open area test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- The height of the equipment or of the substitution antenna shall be 0.8 m; the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured, above 1G Average detector mode will be instead.
- If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP(AV) Limits and then no additional QP Mode measurement performed.
- For the actual test configuration, please refer to the related Item –EUT Test Photos.

## 7. Immunity

### Performance criteria

#### Performance criterion A

The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended.

The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

#### Performance criterion B

After the test, the equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the equipment is used as intended.

The performance level may be replaced by a permissible loss of performance.

During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test.

#### Performance criterion C

Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions.

Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

## 7.1. Electrostatic discharges

### 7.1.1. Test standard and Levels

| Environmental phenomenon | Test specifications    | Basic standard |
|--------------------------|------------------------|----------------|
| Electrostatic discharge  | 8 kV air discharge     | IEC 61000-4-2  |
|                          | 4 kV contact discharge |                |

### 7.1.2. Block diagram of test setup

For table-top equipment

## For floor standing equipment

## For table-top & floor standing equipment

### 7.1.3. Test Procedure

#### 1. Air discharge:

This test is done on a non-conductive surface. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

#### 2. Contact discharge:

All the procedure shall be same as Section 1. except that the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.

#### 3. Indirect discharge for horizontal coupling plane

At least 20 single discharges shall be applied to the horizontal coupling plane, at points on each side of the EUT. The discharge electrode positions vertically at a distance of 0.1m from the EUT and with the discharge electrode touching the coupling plane.

#### 4. Indirect discharge for vertical coupling plane

At least 20 single discharge shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

### 7.1.4. Test Result

| Air Discharge     | Slots, Apertures, and Insulating Surfaces | 8             | 10                                              | B                     | A                  |
| Note*: N/A        |                                           |               |                                                 |                       |                    |

## 7.2. Radio-frequency electromagnetic field

### 7.2.1. Test standard and Levels

| Characteristics | Test levels               | Test levels               | Basic standard |
|-----------------|---------------------------|---------------------------|----------------|
| Frequency range | 80 MHz to 1000 MHz,       | 1400 MHz to 6000 MHz      | IEC 61000-4-3  |
| Test level      | 10 V/m (unmodulated)      | 3 V/m (unmodulated)       |                |
| Modulation      | 1 kHz, 80 % AM, sine wave | 1 kHz, 80 % AM, sine wave |                |

### 7.2.2. Block diagram of test setup

For table-top equipment

For floor standing equipment

### 7.2.3. Test Procedure

Measurement was performed in full-anechoic chamber.

Measurement procedure was applied according to EN 61000-4-3 clause 8.

The test method and equipment was specified by EN 61000-4-3.

### 7.2.4. Test Result
